

When we woke up to our daughter, who was just 8 months old, having a complex febrile seizure it was like a nightmare.

Living in our rural area is a blessing for our family but having four children and knowing at best your closet emergency room is forty five minutes away is one of my biggest fears as a mother.

That night there was nothing we could do to help our daughter, having Trinity County Life Support saved her life. They were able to provide the medical care that she needed that moment, they were able to stop the seizure that had lasted over 10 minutes and showed no sign of stopping on its own. We had no one else around who could help for miles and miles.

After that first experience, we found out that our daughter could have another seizure whenever she ran a fever. Sure enough 7 months later we woke up to another seizure. TCLS not only showed up again quickly but remembered our daughter and her history and had a helicopter on its way. They were compassionate, vital, and efficient while helping our little girl. Knowing that we could rely on their help is so critical.

While we hope that we won't need to make any more 1:00am nightmare calls to Trinity County Life support, we know we could need to at any time and I cannot imagine not having that as an option. It would be absolutely devastating to my family and to our community!

Thank you to everyone who came to our rescue those nights! EMTs, Paramedics, Volunteer Fire, Cal-Fire, TCSO, and anyone else who helped in some way. And know our family will support Trinity County Life Support any way we possibly can!
